HubSpot FP&A case study

Q2 2026 variance review and H2 operating forecast | Public results through June 30, 2026

Executive view. Q2 reported revenue exceeded the midpoint of HubSpot's May guidance by **$14.24m (1.6%)**. Against an illustrative analyst GAAP cost plan, operating income was **$14.54m higher**. The H2 base case produces $1,908.63m of revenue; slower customer and yield growth reduce the downside case to $1,844.12m.

Q2 result versus planning benchmark

USD millions	Plan	Actual	Variance
Total revenue	**$897.50**	**$911.74**	**+$14.24**
GAAP operating income	$28.78	$43.32	+$14.54
GAAP operating margin	3.2%	4.8%	+1.5 pp

Revenue plan = published Q2 guidance midpoint. The cost plan and its GAAP operating income are illustrative, using Q1 GAAP cost ratios; HubSpot did not report this as its internal budget.

What explains the revenue variance

Bridge from $897.50m plan	Impact
Average customer count	-$0.02m
Effective quarterly subscription yield	+$15.24m
Services and other revenue	-$0.99m
Net revenue variance	**+$14.24m**

Reported net customer additions were 6,988, almost equal to the illustrative 7,000 plan. The model's effective quarterly subscription yield was about $2,951 per average customer, versus $2,901 implied by the plan. Subscription cost of revenue was $14.77m above the Q1-rate cost plan, partly offset by R&D expense $12.76m below it. These are comparisons with analyst assumptions, not claims about HubSpot's internal spending targets.

H2 selected scenarios

Illustrative case	H2 revenue	H2 GAAP operating income	Q4 ending customers
Base	$1,908.63m	$93.43m	323,946
Downside	$1,844.12m	$34.13m	314,946

FP&A follow-up: Track net customer additions and subscription yield separately, then review whether subscription cost stays near the base case 16.3%-16.5% of subscription revenue. Refresh Q3 actuals and reforecast Q4 when the next filing is available.

Scope and sources

This is an educational operating model. It uses GAAP results, a model-derived yield proxy (subscription revenue divided by average beginning and ending customers), and hypothetical scenario inputs. That yield is not HubSpot's reported average subscription revenue per customer. The model excludes monthly actuals, churn, ARR, cash flow, and any undisclosed internal budget.
